AQUA

General Information

This product is sold with a re-useable tamper proof lid, which will keep your food fresh and dry to preserve all the nutrients for the best diet possible. It has been developed by people who not only care about fishkeeping, but have a proven know-how. We only use ingredients of the highest quality to promote all aspects of health, growth and development, also paying special attention to the digestion and welfare of the fish. The prime objective is fish welfare and to improve digestion. This reduces waste which improves water quality and clarity which are important for fish health.

Feeding

These pellets have been specially designed to maximise the development of your koi's growth and colours. They form a complete high protein well balanced floating diet, formulated from high quality ingredients to maximise koi growth, body shape, colour and health development. Feed your fish the quantity of food they can consume in several minutes without any waste - you can always feed more if need be. This amount will vary depending on pond temperature and water quality. Do not feed below 4 degrees C.

There is NO artificial colouring used whatsoever which can often discolour your water.

This along with reduced waste helps to keep your water crystal clear. With Omega 3 and 6, BioMos and Spirulina, growth, health and vibrant colours are greatly enhanced.

Ingredients: Soya, Fish meal, Maize, White rice, Maize gluten, Salmon Oil, Wheatgerm, Spirulina, BioMos, Minerals, Vitamins
